Irish SRS & SBRT Symposium

This symposium aims to increase the awareness and knowledge of the indications and techniques of intra-cranial SRS and extra-cranial SBRT, at a time when an expansion of SRS/SBRT activity is planned across Ireland and the European Continent. This two-day, fully interactive educational program will cover some of the fundamentals and advanced concepts of SRS/SBRT, technological challenges, quality assurance and patient safety, and the present and future clinical applications. Interactive workshops on treatment planning, respiratory motion analysis and multimodality imaging for intra-cranial planning will be run during the symposium.

The symposium faculty has significant links with the academic and research world, both nationally and internationally, as well as Trans-European experience. The target audience includes Radiation Oncologists, Medical Physicists, Radiation Therapists, and allied health professionals, as well as Neurosurgeons, Medical Oncologists and Researchers.

This event is jointly organized by Beacon Hospital, St Luke's Institute of Cancer Research and Hermitage Medical Clinic. EACCME, ESTRO EFOMP, IIRT accreditations applied

Abstract Submissions is open for the poster exhibition. Closing date for Applications is April 1st 2019.
